

# Fire Alarm Service

## Fire Alarm Service

Fire alarm systems are more complicated than they used to be. Most local and state regulations require fire alarm control panels, initiating devices, alarm communication equipment and remote annunciators to be inspected at least annually. Koorsen Fire & Security has the expertise to inspect and repair any fire alarm system. Our technicians are continuously trained to remain current with the ever-changing technology. If your system needs to be replaced or updated, we can provide engineering, design and installation.

## Inspection Procedures

- Check fire alarm panel to ensure alarm initiating devices are functioning properly.
- Verify alarm indicating devices are functioning properly.
- Verify supervisory signal initiating devices are functioning properly.
- Verify system power supplies (including battery backups) are sufficient.
- Clean detectors with compressed air.
- Test functionality of detectors with test smoke.
- Check every pull station for accessibility.
- Verify points being monitored are correct (if the facility has a remote annunciator).
- Verify signal reached the monitoring company's office (if the system is monitored).

## Sensitivity Testing

New fire codes mandate that every other year your smoke detection devices must have a sensitivity test (in addition to the functional test). Koorsen Fire & Security can perform this test with our state-of-the-art Underwriters Laboratories (UL) listed equipment.

## Monitoring

Koorsen Fire & Security can monitor your fire alarm system with our UL listed monitoring company. This service can provide you with peace of mind knowing your business is protected 24-hours a day.
