

General Products

Koorsen Fire & Security provides a complete line of general products and services to assist you with exit and emergency lighting, fire hoses, signs, flammable liquid cabinets and other safety related products.

Exit/Emergency Lighting

Exit and emergency lighting systems are required to be inspected and maintained as often as your portable fire extinguishers. Local, state and national standards have mandated this requirement. Koorsen Fire & Security will ensure your company is within local fire and building code requirements by conducting the monthly and annual inspections of your exit and emergency lighting system. Our trained technician will complete the following steps:

Monthly

1. Ensure the emergency lighting equipment is in its designated place.
2. Inspect the housing for physical damage.
3. Push test switch for 30 seconds.
4. Verify lamps are illuminated and aimed in the correct direction.
5. Maintain the monthly log for inspection by the authority having jurisdiction (AHJ).

Annually

1. Conduct a thorough examination of the unit.
2. Conduct an operational test of the battery and lighting system for the required 90 minutes.
3. Check condition and voltage of the battery and verify manufacturer date.
4. Check AC/DC lamps or bulbs for damage and proper operation.
5. Verify charging circuit is operational and working properly.
6. Apply emergency lighting test label to each light upon completion.

NOTE: Our technicians can provide batteries, bulbs and new units if needed.

Fire Hose/Nozzles/Couplings

A fire hose utilized in your facility can be a great asset to your fire protection plan if it is properly maintained per local requirements. A trained technician will conduct the monthly and annual inspection of the fire hose in your facility. We will conduct a "quick check" monthly to ensure the hose is ready for use. Annually our technicians will conduct a "thorough" inspection of the fire hose, check the manufacturer date and inspect each length of hose to ensure it is ready to be utilized if needed. We will also verify the operation of the nozzle and placement of the fire hose. If necessary, we will hydro test your hose five years from the manufacture date and every three years thereafter. We can also provide fire hose nozzles and associated equipment.
